Did the program change your perspective on teaching math:

8 responses

What is the one main thing you learnt from this program?

- Maths is not just solving on paper can be learnt easily through concepts. Lasts for life time.
- The basics of Number concepts should be strengthened first and it will be easier to take the child through to the succeeding levels.
- To keep things simple and to focus on the child's perspective.
- Every math concept has a practical application.
- How to teach maths in a simple and interesting way to the child
- Maths is everywhere and kids should be made aware of it. There are many fun ways of teaching maths.
- I learnt teaching math in easy method and activity based.
- Relating maths in real life. Comparison stories

What is your overall rating about the entire program?

Overall Comments:

- Imparted great concepts. Right from pre number concepts to friends of numbers. I feel that these concepts are helpful to not just for the children with special needs, but also the main stream. I would definitely suggest that all the maths teacher's especially pre-primary teachers in the main stream schools also, to attend this program so that they would teach the children the same way instead of how we learnt.
- The program was conducted very well and it was very informative. The sessions were very interactive. I think it will be very useful once I start my classes again with my kids. Thanks a lot for the wonderful experience.
- Wonderful program; Coordinated and presented very lively and interesting; I never felt like having a break at all in the 2 hours duration. It was an eye-opener to understand that prioritizing the child's perspective, not only while teaching math but in all aspects, is the most important one.
- Assignments n journal really help us to know what we understood. Or explain pre number concept. We need a flow chart it will be really helpful.
- More time for discussion of the assignments given after completion - More time for activities like role play etc.
- The sessions were explained clearly. There was coherence between topics. The overall connection of the topics with maths was brought out well. Now, I need time to assimilate whatever I learnt and practice on my kid. And only when I practice, will I get more doubts. So, if there can be channel for interaction with you, it would be very helpful.
- It was really good and helpful.
- Well-presented programme. Facilitator was very clear with the content and very well delivered. Very much approachable and interactive. Looking forward for the next session. Thank you Diksa
