Overall Comments:

- Program is much needed for every parent.
- Thank you very much for the wonderful learning experience. It left me in a sense of wonder that addition and subtraction can be taught in such an interesting, interactive manner. Teaching the basic operations this way will instil more confidence in children. No child will refuse or dodge doing math if math is taught using this methodology. Thanks & Regards, Ganga.
- Making us do more activities and having an extra class may be helpful
- Very informative and practically applicable solutions. Loved the sessions
- The workshop greatly expanded my understanding of the operation and gave me great understanding of how it can be used & taught to students. Excellent workshop, learned a great deal and inspired to learn more.

What is the one main thing you learnt from this Level 2 program?

- Add & Sub concepts can be taught with story also for subtraction using stick kids will escape from borrowing concept.
- I learnt how important it is to keep things simple. The language, the numbers given in the sums shouldn't be complicated and the focus should be on making the child understand the concept. This realization happened.
- How the basic math operations can be simplified and explained easily to the child
- It was like unlearning and learning again. There were some moments where I felt wow why didn't I think of this. A very useful session
- Readiness of the child before teaching the concept. Importance of conceptual learning.
